Descripción de la API

URL base: https://www.breakingbadapi.com/api/

Función	Endpoint
Obtener todos los personajes junto a sus datos	/api/characters
Obtener un personaje por ID del personaje	<mark>/api</mark> /characters/[id]
Obtener personajes búsqueda de nombre	/api/characters?name=[nombre]

Ejemplo de personaje obtenido con /api/characters/1

```
{
  char_id: 1,
  name: "Walter White",
  birthday: "09-07-1958",
  occupation: [
    "High School Chemistry Teacher",
    "Meth King Pin"
  ],
  img: "https://images.amcnetworks.com/amc.com/wp-content/uploads/2015/04/
cast_bb_700x1000_walter-white-lg.jpg",
  status: "Deceased",
  appearance: [1, 2, 3, 4, 5],
  nickname: "Heisenberg",
  portrayed: "Bryan Cranston"
}
```

Ejemplo de lista de personajes obtenidos buscando por Walter White

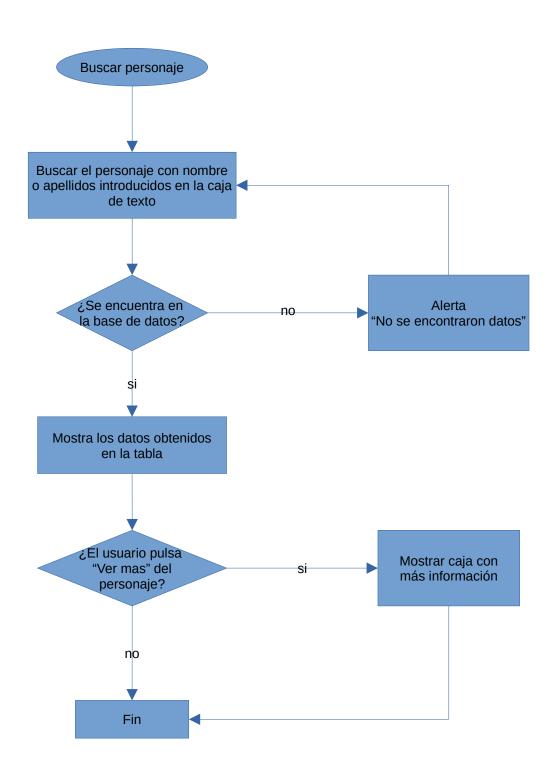

/api/characters?name=Walter+White

```
{
  char_id: 1,
  name: "Walter White",
  birthday: "09-07-1958",
  occupation: [
    "High School Chemistry Teacher",
    "Meth King Pin"
  ],
  img: "https://images.amcnetworks.com/amc.com/wp-content/uploa...",
  status: "Deceased",
  appearance: [1, 2, 3, 4, 5],
  nickname: "Heisenberg",
  portrayed: "Bryan Cranston",
  better_call_saul_appearance: [ ]
},
{
  char_id: 4,
  name: "Walter White Jr.",
  birthday: "07-08-1993",
  occupation: [
    "Teenager"
  img: "https://media1.popsugar-assets.com/files/thumbor/WeLUSvbA...",
  status: "Alive",
  nickname: "Flynn",
  appearance: [ 1, 2, 3, 4, 5 ],
  portrayed: "RJ Mitte",
  category: "Breaking Bad",
  better_call_saul_appearance: [ ]
}
```

Componentes

```
BotonVerInfo.vue
  • Props
      ∘ id { type: Number, required }
Buscar.vue
  • Props
      o buscando { type: Boolean, required }
      o mostrar_fav { type: Boolean, required }
Datos.vue
  • Props
      o datos { type: Array, required }
  • Emits
      verInfoPersonaje (char_id)
DatosEntrada.vue
     Props
      o datos { type: Object, required }
      o id { type: Number, required }
     Emits
      verInfoPersonaje (char_id)
PersonajeInfo.vue
  • Props
      o personaje_info { type: Any, required }
      o en_favoritos { type: Boolean, required }
```

Diagrama de flujos

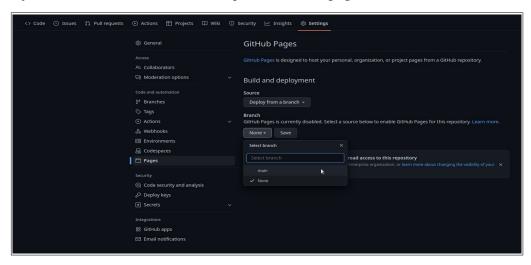

Despliegue en GitHub Pages

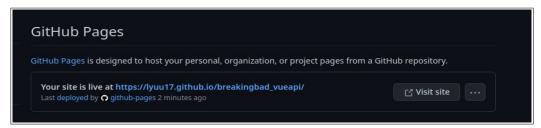

GitHub Pages: https://lyuu17.github.io/breakingbad_vueapi/

Despliegue manual

Dentro de los ajustes del respositorio, nos desplazamos a la categoría Pages dentro de Code and automation y seleccionamos la branch en la que tenemos la página

Se nos desplegará la página después de unos minutos en https://[usuario].github.com/[nombre_repositorio]

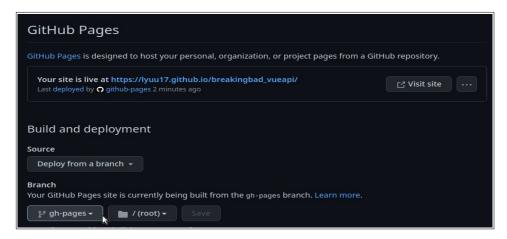

Despliegue automático con GitHub Actions

Creamos un fichero nuevo en la ruta .github/workflows/node.js.yml (con el punto antes de github) con la siguiente configuración:

```
# This workflow will do a clean installation of node dependencies, cache/restore them, build the
source code and run tests across different versions of node
# For more information see: https://docs.github.com/en/actions/automating-builds-and-tests/building-
and-testing-nodejs
name: Node.js CI
on:
  push:
    branches: [ "main" ]
  pull_request:
   branches: [ "main" ]
jobs:
  build:
    runs-on: ubuntu-latest
    strategy:
      matrix:
        node-version: [18.x]
        # See supported Node.js release schedule at https://nodejs.org/en/about/releases/
    steps:
    - uses: actions/checkout@v3
    - name: Use Node.js ${{ matrix.node-version }}
      uses: actions/setup-node@v3
          node-version: ${{ matrix.node-version }}
        cache: 'npm'
    - run: npm ci
     run: npm run build --if-present
    - name: Deploy to GH Pages 🕅
      uses: peaceiris/actions-gh-pages@v3
      with:
        github_token: ${{ secrets.GITHUB_TOKEN }}
        publish_dir: dist
```

Se nos creará una branch nueva llamada gh-pages la cual tendrá que ser puesta en la configuración de GitHub Pages.

Podremos gestionar los workflows en la pestaña Actions y poder re-run las workflows. Automáticamente se desplegará la página actualizada después de realizar cambios a la branch main
